            break;
        default:

লুপ নিয়ন্ত্রণ — Loop Control

৫৯. continue স্টেটমেন্ট — ৩ বাদ দিয়ে বাকি প্রিন্ট 59. CONTINUE STATEMENT – SKIP 3, PRINT REST

continue কী করে?

লুপের ভেতরে continue পেলে সেই পুনরাবৃত্তির বাকি অংশ বাদ দিয়ে

সরাসরি পরের পুনরাবৃত্তিতে চলে যায়।

উদাহরণ (i=3 হলে skip): আউটপুট → 1 2 4 5 6 7 8 9 10 (3 বাদ)

#include <stdio.h>

```
int main() {
    for (int i = 1; i <= 10; i++) {
        if (i == 3) continue;
        printf("%d ", i);
    }
    return 0;
} // Output: 1 2 4 5 6 7 8 9 10
```

C

#include <iostream>
using namespace std;

```
int main() {
    for (int i = 1; i <= 10; i++) {
        if (i == 3) continue;
        cout << i << " ";
    }

} // Output: 1 2 4 5 6 7 8 9 10
```

C++

৬০. break স্টেটমেন্ট — ৩-এ থামানো 60. BREAK STATEMENT – STOP AT 3

break কী করে?

লুপের ভেতরে break পেলে সম্পূর্ণ লুপ বন্ধ হয়ে বাইরে চলে আসে।

উদাহরণ (i==3 হলে stop): আউটপুট → 1 2 (3 আসতেই থামে)

continue vs break:

continue → শুধু এই পুনরাবৃত্তি বাদ, লুপ চলতে থাকে।

break → পুরো লুপই বন্ধ।

```
#include <stdio.h>
```

```
int main() {  
    for (int i = 1; i <= 10; i++) {  
        if (i == 3) break;  
        printf("%d ", i);  
    }  
    return 0;  
} // Output: 1 2
```

C

```
#include <iostream>  
using namespace std;
```

```
int main() {  
    for (int i = 1; i <= 10; i++) {  
        if (i == 3) break;  
        cout << i << " ";  
    }

} // Output: 1 2
